Opt. Continuum

1. Snapshot super-resolution indirect time-of-flight camera using a grating-based subpixel encoder and depth-regularizing compressive reconstruction
2. 100 kW ultra high power fiber laser
3. Effects of a variable linewidth laser and variable linewidth shape laser on coherent FMCW LiDAR
4. Terahertz wireless communication in a 560-GHz band using a Kerr micro-resonator soliton comb
5. Directional, multi-beam, and compact wavefront transformers based on 3-D near-zero refractive index metamaterial
6. Offset lock with a 440-GHz range using electro-optic modulation
7. Vernier effect based on hybrid fiber interferometers: a new tool for wavelength switchability and adjustable free spectral range fiber lasing
8. POICAL: a Python-based library to perform optical coating analysis and design
9. Fusion of an RGB camera and LiDAR sensor through a Graph CNN for 3D object detection
